

*failed sub-goal  
details*

```
graph TD; A["failed sub-goal details"] -- "Input from Failure Analyser" --> B["Recovery Unit"]; B -- "Output to Task planner" --> C["Goal failure notification"]; B -- "Output to Execution unit" --> D["Modifications in sub-goal constraints"];
```

The diagram illustrates the workflow of a Recovery Unit. It begins with a box at the top containing the text "failed sub-goal details". A vertical arrow points down from this box to a central box labeled "Recovery Unit". Above this arrow is the text "Input from Failure Analyser". From the "Recovery Unit" box, two arrows point downwards. The left arrow is labeled "Output to Task planner" and points to a box containing "Goal failure notification". The right arrow is labeled "Output to Execution unit" and points to a box containing "Modifications in sub-goal constraints".

**Input  
from  
Failure  
Analyser**

**Recovery  
Unit**

**Output to  
Task planner**

*Goal failure  
notification*

**Output to  
Execution  
unit**

*Modifications  
in sub-goal  
constraints*
